Art Unit: 2456

Response to Amendment

This Office Action is in response to a communication made on October 20, 2010.

Claims 11, 15, and 19 have been cancelled.

Claims 1-10, 12-14, 16-18, and 20-23 are pending in this application.

Claim Objections

Claim 12 is objected to because of the following informalities: The claim recites a "hot name". The examiner believes that this should instead refer to a "host name".

Appropriate correction or explanation is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "said at least one multimedia device" in line 14.

There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

Art Unit: 2456

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior at are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-10, 14, 16-18, 20 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abecassis (6192340) in view of Day (5996015), and in further view of Rayago (6529584).

Regarding claim 1, Abecassis teaches a method for providing multimedia content over a network (Column 2, line 62 – Column 3, line 4), comprising:

- (a) connecting a multimedia device (Column 5, lines 20 25) to a media server storing a plurality of selectable multimedia clips over a communications network
 (Column 11, lines 58 – 64);
- (b) generating a menu for selecting selectable multimedia clips for playing by said multimedia device (Column 16, lines 47 – 67);
- (c) generating a playlist that includes said selected at least one of said plurality of selectable multimedia clips (Column 15, lines 58 – 62);
- (d) transferring said generated playlist from said selected media server to said at least one multimedia device (Column 16, lines 20 – 24).

Abecassis does not explicitly indicate selecting specific clips accomplished by user interaction with a menu generated by the server and that the menu interaction and the multimedia device is authenticated and authorized to access to said plurality of multimedia clips.

Art Unit: 2456

Day teaches a system with a server and a multimedia device (Column 2, lines 40 – 44) which allows the user to interactively select items from a list of items presented to the device from the server (Column 5, lines 30 – 41; Column 6, lines 26 – 29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Day's teachings of presenting a multimedia device a menu or list of items that can be selected by the user to be added to a playlist in Abecassis system in order to have the user be able to be more interactive with a multimedia on demand system and have the ability to customize the playlist.

Ravago teaches a system for accessing an audio database (Col. 3, II. 8-12) where the user's mobile device provides interactivity (Col. 6, II. 59-67) with a generated playlist (Col. 5, II. 55-67). Ravago suggests within the teaching that the user's mobile device must first sign-on and be authenticated before that device is authorized to access any music or commands of the server (Col. 6, II. 13-29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Ravago's teaching of authenticating the client at the server in order to ensure there is no unauthorized access to media clips.

Regarding claim 2, Abecassis teaches the method of claim 1 wherein said communications network is a local home communications network (Column 12, lines 41 - 43).

Regarding claim 3, Abecassis teaches the method of claim 1 wherein said communications network is a public communications network (Column 11, lines 12 – 19).

Art Unit: 2456

Regarding claim 4, Abecassis teaches the method of claim 1 wherein said communications network is the Internet (Column 11, line 19).

Regarding claim 5, Abecassis teaches the method of claim 1 wherein said playlist file comprises audio data (Column 15, lines 58 – 67).

Regarding claim 6, Abecassis teaches the method of claim 1 further comprising the steps of (e) providing a list of said media servers available to said at least one multimedia device (Column 25, lines 59 – 67).

Regarding claim 17, Abecassis teaches the method of claim 1, wherein said multimedia device is connected to said media server via a TCP/IP network (Column 27, lines 10 – 25; where ISP and internet connections use TCP/IP), and the step of selecting at least one of said plurality of selectable multimedia clips is performed (Column 27, lines 41 – 42) on said media server using a browser interface provided to said multimedia device by said media server (Column 19, lines 1 – 8; Figure 5 and 6)

Regarding claim 18, Abecassis teaches the method of claim 17, wherein said media server generates said playlist in response to said selection of multimedia clips received from said multimedia device (Column 2, line 62 – Column 3, line 4; Column 3, lines 24 – 30).

Regarding claim 20, Abecassis teaches that said step of rendering said playlist is performed by the multimedia device, and comprising the further steps of:

parsing said playlist in said multimedia device; and

Art Unit: 2456

retrieving digital multimedia files specified in said playlist over said communications network in response to said parsing operation for playback at said multimedia device (Column 24, lines 12 – 20).

Regarding claim 7, Abecassis teaches a method for providing multimedia content over a network (Column 2, line 62 – Column 3, line 4), comprising the steps of:

- (a) displaying a list of one or more media servers storing a plurality of selectable multimedia clips available to one or more multimedia devices (Column 25, lines 59 – 67);
- (b) selecting a media server from said list of one or more media servers (Column 25, lines 36 – 43);
- (c) connecting said one or more multimedia devices (Column 5, lines 20 25) to said selected media server via a browser interface (Column 11, lines 58 64; Column 6, line 62 Column 7, line 8);
- (d) selecting at least one of said plurality of selectable multimedia clips (Column 9, lines 51 58) for rendering by said one or more multimedia devices (Column 16, lines 47 67);
 - (e) receiving a playlist (Column 3, lines 26 30; Column 24, lines 12 20);
 - (g) parsing said playlist (Column 3, lines 26 30; Column 24, lines 12 20); and
- (h) rendering said selected at least one of said plurality of selectable multimedia clips by retrieving files defined in said playlist (Column 14, lines 60 – 63).

Abecassis does not explicitly indicate selecting specific clips accomplished by user interaction with a menu generated by the server and that the menu interaction and

Art Unit: 2456

the multimedia device is authenticated and authorized to access to said plurality of multimedia clips.

Day teaches a system with a server and a multimedia device (Column 2, lines 40 – 44) which allows the user to interactively select items from a list of items presented to the device from the server (Column 5, lines 30 – 41; Column 6, lines 26 – 29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Day's teachings of presenting a multimedia device a menu or list of items that can be selected by the user to be added to a playlist in Abecassis system in order to have the user be able to be more interactive with a multimedia on demand system and have the ability to customize the playlist.

Ravago teaches a system for accessing an audio database (Col. 3, II. 8-12) where the user's mobile device provides interactivity (Col. 6, II. 59-67) with a generated playlist (Col. 5, II. 55-67). Ravago suggests within the teaching that the user's mobile device must first sign-on and be authenticated before that device is authorized to access any music or commands of the server (Col. 6, II. 13-29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Ravago's teaching of authenticating the client at the server in order to ensure there is no unauthorized access to media clips.

Regarding claim 8, Abecassis teaches a networked based multimedia delivery system (Column 2, line 62 – Column 3, line 4) comprising:

Art Unit: 2456

(a) at least one multimedia device having input means and display means
 through which a user may request multimedia clips and output means through which
 requested multimedia clips may be played (Column 5, lines 25 – 36);

- (b) at least one media server in communications with said at least one multimedia device for generating a playlist file containing multimedia clips (Column 15, lines 58 62) and providing said playlist file to said at least one multimedia device in response to said user's request for multimedia clips (Column 16, lines 20 24); and
- (c) a local home communications network for interfacing said at least one multimedia device with said at least one media server (Column 12, lines 41 – 43).

Abecassis does not explicitly indicate selecting specific clips accomplished by user interaction with a menu generated by the server and that the menu interaction and the multimedia device is authenticated and authorized to access to said plurality of multimedia clips.

Day teaches a system with a server and a multimedia device (Column 2, lines 40 – 44) which allows the user to interactively select items from a list of items presented to the device from the server (Column 5, lines 30 – 41; Column 6, lines 26 – 29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Day's teachings of presenting a multimedia device a menu or list of items that can be selected by the user to be added to a playlist in Abecassis system in order to have the user be able to be more interactive with a multimedia on demand system and have the ability to customize the playlist.

Art Unit: 2456

Ravago teaches a system for accessing an audio database (Col. 3, II. 8-12) where the user's mobile device provides interactivity (Col. 6, II. 59-67) with a generated playlist (Col. 5, II. 55-67). Ravago suggests within the teaching that the user's mobile device must first sign-on and be authenticated before that device is authorized to access any music or commands of the server (Col. 6, II. 13-29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Ravago's teaching of authenticating the client at the server in order to ensure there is no unauthorized access to media clips.

Regarding claim 9, Abecassis teaches the network based multimedia delivery system of claim 8 further comprising:

- (d) an access link for connecting said local home communication network to said at least one media server over a public communications network (Column 11, lines 1 19); and
- (e) an access gateway for translating communications protocols between said local home communications network and said access link (Column 11, lines 12 – 15).

Regarding claim 10, Abecassis teaches the network based multimedia delivery system of claim 9, wherein said public network is the Internet (Column 11, line 19).

Regarding claim 14, Abecassis teaches a networked based multimedia delivery system comprising (Column 2, line 62 – Column 3, line 4):

 (a) at least one media server for generating a playlist file from a plurality of centrally stored multimedia clips in response to a user request (Column 15, lines 58 – 63); and

Art Unit: 2456

(b) at least one multimedia device in communications with said at least one media server for generating said user request, wherein said at least one multimedia device is further used to receive and parse said generated playlist file (Column 15, lines 58-63).

Abecassis does not explicitly indicate selecting specific clips accomplished by user interaction with a menu generated by the server and that the menu interaction and the multimedia device is authenticated and authorized to access to said plurality of multimedia clips.

Day teaches a system with a server and a multimedia device (Column 2, lines 40 – 44) which allows the user to interactively select items from a list of items presented to the device from the server (Column 5, lines 30 – 41; Column 6, lines 26 – 29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Day's teachings of presenting a multimedia device a menu or list of items that can be selected by the user to be added to a playlist in Abecassis system in order to have the user be able to be more interactive with a multimedia on demand system and have the ability to customize the playlist.

Ravago teaches a system for accessing an audio database (Col. 3, II. 8-12) where the user's mobile device provides interactivity (Col. 6, II. 59-67) with a generated playlist (Col. 5, II. 55-67). Ravago suggests within the teaching that the user's mobile device must first sign-on and be authenticated before that device is authorized to access any music or commands of the server (Col. 6, II. 13-29).

Art Unit: 2456

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Ravago's teaching of authenticating the client at the server in order to ensure there is no unauthorized access to media clips.

Regarding claim 16, Abecassis teaches a multimedia device for use in a network based multimedia delivery system (Column 2, line 62 – Column 3, line 4) comprising:

- (a) means for automatically configuring the multimedia device on a communications network (Column 16, lines 31 – 37);
- (b) means for displaying at least one media server in communications with the multimedia device over said communications network, wherein said at least one media server has a plurality of stored multimedia clips;
- (c) means for interactively searching said plurality of stored multimedia clips using all or a portion of a text string (Column 25, lines 59 67);
- (d) means for passively searching said plurality of stored multimedia clips(Column 16, lines 47 67);
- (e) means for requesting at least one of said plurality of stored multimedia clips from said at least one media server;
- (f) means for receiving a remotely generated playlist data file from said at least one media server over said communications network, wherein said remotely generated playlist data file is comprised of data identifying said requested at least one of said plurality of stored multimedia clips (Column 24, lines 12 – 20);

Art Unit: 2456

(g) means for parsing said remotely generated data file (Column 15, lines 1 – 14); and

(h) means for displaying said remotely generated data file with local data (Column 9. lines 16 – 19).

Abecassis does not explicitly indicate selecting specific clips accomplished by user interaction with a menu generated by the server and that the menu interaction and the multimedia device is authenticated prior to granting access to said plurality of multimedia clips.

Day teaches a system with a server and a multimedia device (Column 2, lines 40 – 44) which allows the user to interactively select items from a list of items presented to the device from the server (Column 5, lines 30 – 41; Column 6, lines 26 – 29).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Day's teachings of presenting a multimedia device a menu or list of items that can be selected by the user to be added to a playlist in Abecassis system in order to have the user be able to be more interactive with a multimedia on demand system and have the ability to customize the playlist.

Ravago teaches a system for accessing an audio database (Col. 3, II. 8 – 12) where the user's mobile device provides interactivity (Col. 6, II. 59 – 67) with a generated playlist (Col. 5, II. 55 – 67). Ravago suggests within the teaching that the user's mobile device must first sign-on and be authenticated before that device is authorized to access any music or commands of the server (Col. 6, II. 13 – 29).

Art Unit: 2456

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Ravago's teaching of authenticating the client at the server in order to ensure there is no unauthorized access to media clips.

Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abecassis in view of Day and Ravago, and further in view of Holland (6446096).

Regarding claim 12, Abecassis teaches the network based multimedia delivery system of claim 8, wherein said multimedia device is designed to

- (a) be automatically configured on said local home communications network (Column 5, lines 49-56);
 - (b) resolve a hot name in a URL using DNS call (Column 2, lines 45 50);
 - (c) issue HTTP request;
 - (d) receive HTTP responses containing MIME objects;
 - (e) HTML content (Column 25, 59 Column 26, line 7);
 - (f) parse said playlist;
 - (g) interactively search a database of track, album, and playlist information;
 - (h) mix said playlist with local content; and
- (i) receive channels of multimedia clips from said media server (Column 27, lines 41 – 52).

Holland discloses a system that provides communication and menu interfaces to multimedia devices, using the WML standard to provide interactivity of the menu to the multimedia device (Column 5, lines 25 – 30).

Art Unit: 2456

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Holland's teaching of using WML to provide an interactive display to devices of limited capabilities such as the multimedia player in Abecassis.

Regarding claim 13, Abecassis teaches the network based multimedia delivery system of claim 8 wherein said multimedia device is designed to

- (a) be automatically configured on said local home communications network(Column 5, lines 49 56);
 - (b) issue HTTP request;
 - (c) receive HTTP responses containing MIME objects
 - (d) display HTML content (Column 25, line 59 Column 26, line 7);
 - (e) parse said playlist; and
 - (f) mix said playlist with local content (Column 27, lines 41 52).

Holland discloses a system that provides communication and menu interfaces to multimedia devices, using the WML standard to provide interactivity of the menu to the multimedia device (Column 5, lines 25 – 30).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Holland's teaching of using WML to provide an interactive display to devices of limited capabilities such as the multimedia player in Abecassis.

Regarding claim 23, Abecassis teaches the method of claim 1 wherein the multimedia device is connected to a plurality of media servers (Column 26, lines 1-7).

Application/Control Number: 09/755,085 Page 15

Art Unit: 2456

Abecassis does not explicitly indicate that the media servers appear to the multimedia device as one entity.

The examiner takes "official notice" that making a plurality of servers appear as a single server to a client in a network was well known in the art at the time the invention was made. See MPEP §2144.03.

Claims 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abecassis in view of Day and Ravago, and further in view of Comerford (5479536).

Regarding claims 21 and 22, Abecassis teaches the method of claims 1 and 16.

Abecassis does not explicitly indicate a portion of a text string, wherein the first few characters of the text string is used to anticipated the entire text string.

Comerford teaches a system with a portable device, like the multimedia device of Abecassis which includes predictive text strings that anticipated entire text strings based on the first few characters entered (Column 2, line 62 – Column 3, line 2).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use Comerford's teaching of text input in Abecassis to increase the usablity of the portable media device in entering test selections.

Response to Arguments

Art Unit: 2456

Applicant's arguments with respect to claims 1-10, 12-14, 16-18, and 20-23 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KEVIN BATES whose telephone number is (571)272-3980. The examiner can normally be reached on M-F 8 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rupal Dharia can be reached on (571) 272-3880. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
